

Tie-rod Cylinders, ISO 6431, ISO 15552 compliant Series 60

EXPRESS DELIVERY AVAILABLE

Single or double-acting, magnetic, cushioned
Standard and low friction versions
ø 32, 40, 50, 63, 80, 100, 125 mm

The Series 60 cylinders comply with the dimensions laid down in the ISO 15552 standards. A permanent magnet, mounted on the piston, enables information to be received regarding the piston position by means of proximity switches positioned along the cylinder tube.

This cylinder series is normally equipped with adjustable end-stroke cushioning. Moreover these cylinders are equipped with bumpers in order to reduce noise and the impact of the piston as it reaches the end of the stroke.

- » In compliance with ISO 15552 standards and with the previous DIN/ISO 6431 - VDMA 24562 standards
- » Rolled stainless steel rod
- » Adjustable pneumatic cushioning
- » Special designs available

LOW FRICTION:

- » Friction force reduced by over 40%
- » Reduced stick-slip effect
- » Minimum operating pressure down to 0,1 bar (1.5 psi)
- » Double-acting with low friction in both directions

LOW TEMPERATURE:

Versions for -40°C and for -50°C

METAL ROD SCRAPER OPTION FOR DIRT/ICE APPLICATIONS

- » For dirt / ice applications
- » Resistant to dust, cement, resin, mud and wood residue

GENERAL DATA

Type of construction	with tie-rods
Operation	double-acting, single-acting, tandem. Low friction version: double-acting only.
Materials	standard = AL end-caps, rolled stainless steel rod AISI 420B, anodized AL tube, zinc-plated steel nuts and tie-rods, PU seals; low friction = standard materials with NBR piston seal and NBR rod seal (FKM rod seal on request); low temperature: standard materials with chrome plated stainless steel AISI 420B rod, brass rod scraper ring, stainless steel AISI 303 nuts, stainless steel AISI 420B tie-rods, PU piston seals and NBR rod seal
Type of mounting	with tie-rods, with front / rear flange, foot mounting, with centre / front / rear / swivel trunnion
Strokes min - max	10 – 2500 mm
Operating temperature	0°C – 80°C (with dry air - 20°C) (32 - 176°F, with dry air -4°F) low temperature (-40°C version): -40°C - 60°C (with dry air -40°C) low temperature (-50°C version): -50°C - 60°C (with dry air -50°C)
Operating pressure	1 – 10 bar (standard and low temperature versions) (14.5 - 145 psi) 0,1 – 10 bar (low friction version) (1.5 - 145 psi)
Speed	10 – 1000 mm/sec, no load (standard and low temperature versions) 5 – 1000 mm/sec, no load (low friction version)
Fluid	filtered air, without lubrication. For standard versions only: if lubricated air is used, it is recommended to use oil ISOVG32. Once applied the lubrication should never be interrupted.

STANDARD STROKES FOR CYLINDERS SERIES 60

■ = Single-acting (standard versions) ✕ = Double-acting (standard low friction and low temperature versions)
Other strokes up to 2500 mm are available on request.

A	CONSTRUCTION: A = standard with lock nut for rod RL = cylinder with rod lock (rod extension required. See table.) F = cylinder with centre trunnion
0200	STROKE: see table = standard V = FKM rod seal N = tandem R = NBR rod seal W = all FKM seals, up to 140C° C = PU coated cylinder. Colour: Grey * L = low friction version without rod seal (rear supply only) ** (_ _ _) = extended piston rod _ _ _ mm G = with brass rod scraper (chrome plated stainless steel AISI 420B rod, NBR rod seal) (Ø 125 excepted) * Version C: available on request. For further information, please contact our technical dept. ** The possibility to order the cylinder without piston rod seal, further reduces the friction force.

LOW FRICTION cylinders Series 60 - APPLICATION EXAMPLES

CYLINDER IN THRUST

DRAWING NOTES:

1. Precision pressure regulator or electro-pneumatic regulator
2. Low friction cylinder
3. Force direction
4. Band

CYLINDER IN TRACTION

Note: in order to reach the highest performance, it is recommended to connect precision pressure regulator or an electro-pneumatic regulator with the low friction cylinder as shown in the drawing.

ISO / VDMA CYLINDERS

LOW TEMPERATURE cylinders Series 60 - DETAIL

Rod scraper included in all low-temperature cylinders

- 1 = rod seal
- 2 = c-clip
- 3 = metal scraper

EXPRESS DELIVERY AVAILABLE

ACCESSORIES FOR CYLINDERS SERIES 60

Piston rod socket joint
Mod. GY

Piston rod nut Mod. U

Clevis pin Mod. S

Rear trunnion ball-joint
Mod. R

Rod fork end Mod. G

Swivel ball joint Mod. GA

90° male trunnion
Mod. ZC

Swivel combination
Mod. I

Centre trunnion Mod. F

Self aligning rod
Mod. GK

Counter bracket for
centre trunnion Mod. BF

Foot mount Mod. B

Front and rear flange
Mod. D-E

Rear female trunnion
Mod. C and C-H

Front female trunnion
Mod. H and C-H

Rear male trunnion
Mod. L

All accessories are supplied separately, except for Piston rod nut Mod. U

Rod Gland

Hard Anodized Aluminum body and integrated design includes rod bearing and rod lip/wiper seal. Rod Bearing is oil impregnated, sintered bronze containing graphite for high speed and heavy load applications.

Piston Rod

All stainless steel ground and polished rods, burnished for improved seal life and reduced wear. Standard.

Rod Threads

Threads are rolled Stainless Steel for greater strength.

Rod Nut

Threads are rolled Stainless Steel for greater strength.

Tie Rod Nuts

Tie rod nuts are ID hexed and ID threaded providing a flush face and ability to assemble and disassemble mounting brackets without loosening Head.

Heads and Caps

Heads and Caps are lightweight aluminum that have been precision machined and anodized.

Piston Bumpers

Shock absorbing bumpers reduce noise and piston wear. Standard.

Piston

Aluminum, one-piece design with built-in solid magnet ensuring consistent switch sensing.

Cushion Adjustment

Recessed and captive cushion adjustment screws. Fine thread adjustment for greater repeatability and accuracy. Standard Viton.

Cylinder Tube

Hard Anodized Aluminum tube that provides superior seal life and wear resistance.

Tie Rods

Zinc plated steel, rolled threads for added strength.

Piston Seals

Rounded lip u-cup seal reduces friction; specifically designed for lube or non-lube service. Maintains factory prelube against the cylinder wall. Standard polyurethane.

Key Flat

Hydraulically pressed key flat.

Rod and Wiper Seal

Piston rod lip seal and wiper combination. A compact design, allowing for greater bushing support without sacrificing sealing ability. Standard polyurethane.

Tube End Seals

Captured seal made from BUNA-N offering a wide range of temperature applications and positive sealing. Standard.

Adjustable Cushion Seal Design

Precision-machined piston spears combined with floating cushion collar allow for a smooth deceleration at end of stroke. Cushion collar is specifically designed for rapid low-pressure breakaway when stroke reverses.

Cylinders Series 60

Note: the single-acting cylinders' sizes ZJ and L2 are increased by 25 mm.

+ = add the stroke

Accessory for mounting valves on the cylinder

The mounting sub-base Mod. PCV enables the valve to be mounted directly on the cylinder using Stud Manifold bolts Mod. 1635 or flow controllers, Mod. SCU. The stud bolts used to attach the valve outlet ports to the PCV mounting plate are model number 1631-01-**(thread size of valve). The other end of the plate has a threaded port to connect fittings to the rear end-cap port.

d* = mounting on the cylinder using Mod. 1635 or Mod. SCU.

Note: the minimum possible stroke is 100mm.
