In-line Flow Control Valves Series RFU - NPTF/INCH

Panel or wall-mounted flow controllers
In-line/Unidirectional, RFU
Ports M5 [10-32 UNF], 1/8", 1/4" NPTF

The unidirectional flow controllers are equipped with M5 [10-32 UNF], 1/8" and 1/4" ports, each of which is available with two different types of adjustment (see diagrams).
They are used mainly for controlling the speed of cylinders.
They may be mounted on control panels or cylinders, as required.

**Coding of Flow Controllers**

- **Series:** RF
- **Function:** U-4 = unidirectional
- **Flow Control Range:**
  - Orifice diameter:
    - 2 = ø 2 max
    - 3 = ø 3 max
    - 4 = ø 4 max
    - 6 = ø 6 max
- **Ports:**
  - M5 = M5 [10-32 UNF]
  - 02 = 1/8” NPTF
  - 04 = 1/4” NPTF

UNIDIRECTIONAL FLOW CONTROLLERS

To ensure the right choice of 1/4” unidirectional flow controller Mod. RFU 444 or Mod. RFU 446, proceed as follows:
calculate the quantity of air in NL/min. (see cylinder table),
determine the stroke time of the cylinder;
refer to the graph to see which controller is the right type. In the case of bidirectional regulators, refer to the graph and check whether the flow control range is suitable for the work required.

Unidirectional flow controller Series RFU

To regulate the speed of a cylinder, the air flow from the chamber which is being discharged must be regulated. For this reason, the unidirectional flow controller must be connected as follows: connect the threaded outlet marked A to the cylinder inlet and the threaded outlet marked B to the valve user port.
